BUDGET STRATEGY AND OUTLOOK

BUDGET PAPER NO. 1
2010-11

CIRCULATED BY

THE HONOURABLE WAYNE SWAN MP
TREASURER OF THE COMMONWEALTH OF AUSTRALIA

AND

THE HONOURABLE LINDSAY TANNER MP
MINISTER FOR FINANCE AND Deregulation
OF THE COMMONWEALTH OF AUSTRALIA

FOR THE INFORMATION OF HONOURABLE MEMBERS
ON THE OCCASION OF THE BUDGET 2010-11

11 MAY 2010

Copyright
© Commonwealth of Australia 2010
ISBN 978-0-642-74595-0

Notwithstanding the general copyright licence provided for on www.budget.gov.au, and with the exception of the Commonwealth Coat of Arms Statement 1: Budget Overview Statement 2: Economic Outlook Statement 3: Fiscal Strategy and Outlook Statement 4: Assessing the Sustainability of the Budget Statement 5: Revenue Statement 6: Statement of Risks, all material presented in this document is provided under a Creative Commons Attribution 2.5 Australia (http://creativecommons.org/licenses/by/2.5/au) licence.

For the avoidance of doubt, this means this licence only applies to material as set out in this document.

The details of the relevant licence conditions are available on the Creative Commons website (accessible using the links provided) as is the full legal code for the CC BY 2.5 AU licence
(http://creativecommons.org/licenses/by/2.5/au/legalcode).

The document should be attributed as the 2010-11 Australian Government Budget – Budget Paper No. 1.
Creative Commons version 3.0 released

- updated to keep up with developments in open access and copyright law.

- First significant adopter - Parliament of Australia
  - will be porting its central [http://www.aph.gov.au](http://www.aph.gov.au) website (including all parliamentary materials: legislation, explanatory memoranda, committee reports, etc.) across to a Creative Commons v3.0 BY-NC-ND Australian licence.
  - Full implementation will occur when the new website is released in late 2010
Crown Copyright

• Vast amounts of government copyright materials
• Copyright applies to:
  – Informational works
  – Research outputs (reports, papers, databases)
  – Cultural materials
• In Australia, UK, NZ, UK data compilations are protected by copyright if they are sufficiently original
  – Protection extends only to the arrangement of the collected components
  – Copyright does not apply to mere facts/information
• Public Sector Information (PSI) in a broad sense includes material that is:
  – created within government by government employees;
  – produced externally by recipients of government funding; or
  – prepared by non-government parties and lodged with government under a statutory obligation or regulatory direction.
Copyright in data compilations

• Protected if meets the originality threshold.
• Protection extends only to the arrangement of the collected components
  • i.e. the particular way the data/components is presented in the compilation.
• Copyright does not apply to mere facts/information
• Copyright interests may co-exist independently in components contained within the database and in the database itself, and may be owned by different parties.
Copyright in data compilations

• The originality test once considered satisfied if substantial labour or expense had been invested in collecting the materials (the so-called “sweat of the brow” approach)
  • Desktop Marketing Systems Pty Ltd v Telstra Corporation Ltd (2002)

• Subsequent case law has cast doubt on this position – substantial labour or expense will not be enough without also “independent intellectual effort”
  • dicta by the High Court in IceTV Pty Limited v Nine Network Australia Pty Limited (2009) and also the application of the principles in IceTV in Telstra Corporation Ltd v Phone Directories Company Pty Ltd (2010) (on appeal)
Copyright in data compilations

Telstra Corporation Ltd v Phone Directories Company Pty Ltd (2010)
– where an author or authors of a compilation can clearly be identified; and
– it can be shown that the compilation is original in the sense that it is the product of
  • some “independent intellectual effort”;
  • the exercise of “sufficient effort of a literary nature”;
  • involves a “creative spark”; or
  • the exercise of “skill and judgment”,
then it is likely to be protected by copyright.
Complex flows of Information

- Flow of information
  - Within government – among departments, agencies, different levels of government
  - between government and community:
    - From government to community
    - From community to government to community

- Problem of “licence logjams”
  - No licences; inconsistent terms; incomprehensible; transaction cost of negotiated permissions

- Promoting the flow of information requires appropriate policy frameworks and licensing practices
Open Access to PSI

- Creating a commons of public sector materials
  - New conceptualisation of “public domain”
  - Not just a no rights “wasteland [or] dump on the outskirts of respectable culture” (Bollier, *Viral Spiral*)
  - Something of value in its own right – open knowledge and content that can be accessed, reused and distributed
  - Encompasses materials that are copyright-protected and made available for access and reuse under open source software and open content licences
Open Access to PSI

“Open access to government data can dramatically increase the value created from the data both socially and economically [and] the society as a whole benefits from access to the data”

- Senator Kate Lundy, Free and Open Source Software for Geospatial Conference 2009

How do we enable PSI to move without impediment among government agencies and between government and the private sector?
Creative Commons (CC)

- Copyright licensing vs “no rights” approach
- Advantages of copyright-based open licensing approach for government:
  - Open licensing mirrors the fundamental justification for recognising copyright in government materials
  - Supports government’s open access policy objectives
  - Provenance and attribution
  - Avoids financial and technical lock-up of taxpayer-funded materials
CC is a Direct, Copyright-based Licence

- Copyright based, direct licences
  - Permitted uses are consents/permissions to do acts within the scope of the copyright owner’s exclusive rights
  - Acting outside the scope of the licence is an infringement of copyright

AUSTRALIA
CC is a Direct, Copyright-based Licence

Legend
W: Copyright Work
DW: Derivative Work
A: Original Author
B, C, D, E: Downstream Recipients of Licensed Copyright Work

Direct Licensing Model
E.g. Creative Commons (Copyright-based licence)

Indirect Licensing Model
(Daisy Chain Model, Combined Contract-Copyright model with sub-licensing)
Creative Commons (CC)

BY:
Attribution – attribute the author

Noncommercial – no commercial use

No Derivative Works – no changes allowed

ShareAlike – changes allowed, but only if you put the new work under the same licence
Creative Commons (CC)

- Attribution
- Attribution-ShareAlike
- Attribution-Noncommercial
- Attribution-Noncommercial-ShareAlike
- Attribution-NoDerivatives
- Attribution-Noncommercial-NoDerivatives
Creative Commons (CC)

Advantages of CC for use by government:

- Enforceability of licence
  - *Trumpet Software v OzEmail* (1996) Federal Ct, Justice Heerey
- Explicit statement of reuse rights
- Clear statement that info is sourced from government (attribution/provenance) – increased user confidence
- Universal recognition of symbols
- Discoverability of digital objects
- Enables legal remix and mashup
Creative Commons (CC)

Attribution and Provenance

- Clause 4, CC-BY 2.5 Australia Legal Code
  - Attribution requirements based on economic rights of copyright owners to maintain electronic rights management information (ERMI) and moral rights (attribution/no false attribution/integrity)
    - Copy of CC Licence/URI of licence must be included
    - All copyright notices must be kept intact
    - Clear and reasonably prominent credit must be given to the Original Author
    - Work not to be falsely attributed
    - Must not do anything that results in a material distortion of, mutilation of, or material alteration to the work that is prejudicial to the Original Author’s honour or reputation
Creative Commons (CC)

Termination on breach

- If a user of a CC licence breaches the terms of the licence, the licence and the rights granted under it terminate automatically.
  - Clause 7(a), Legal Code, Attribution 2.5 Australia
- In the absence of a licence, the ordinary principles of copyright law come into operation.
- Following termination, any unauthorised use of the copyright material by the licensee may be an infringement of copyright that is subject to civil and criminal penalties.
Creative Commons (CC)

Irrevocable

- Perpetual grant of rights, lasting for the full duration of copyright.
  - Clauses 3 and 7(b), Legal Code, Attribution 2.5 Australia.
- No express provision which entitles the licensor to terminate the licence solely for the licensor’s convenience
- However the licensor reserves the right to release the work under a different licence or to stop distributing it at any time.
  - Clause 7(a), Legal Code, Attribution 2.5 Australia.
Creative Commons (CC)

Enforceable

• open licences such as CC licences will be upheld by the courts, even if applied to copyright materials distributed for no financial reward – in Australia, non-contractual (bare) licences are enforceable
  – *Trumpet Software v OzEmail* [1996] FCA 560 (Federal Court of Australia)

• failure to comply with the licence conditions may be an infringement of copyright, for which the usual remedies will apply.

• The most authoritative consideration to date of the effectiveness of open licences is the decision of the United States Court of Appeals for the Federal Circuit in *Jacobsen v Katzer* (US Federal Circuit) in August 2008 -
  – Held that the defendant had gone beyond the scope of the open licence and thereby infringed copyright
OECD PSI Recommendation

- the **“Openness” principle** states:
  - “Maximising the availability of public sector information for use and re-use based upon *presumption of openness as the default rule to facilitate access and re-use*. Developing a regime of access principles or assuming openness in public sector information as a default rule wherever possible no matter what the model of funding is for the development and maintenance of the information. Defining grounds of refusal or limitations, such as for protection of national security interests, personal privacy, preservation of private interests for example where protected by copyright, or the application of national access legislation and rules.”

- the **“Access and transparent conditions for re-use” principle** states:
  - “Encouraging broad non-discriminatory competitive access and conditions for re-use of public sector information, eliminating exclusive arrangements, and removing unnecessary restrictions on the ways in which it can be accessed, used, re-used, combined or shared, so that *in principle all accessible information would be open to re-use by all*. Improving access to information over the Internet and in electronic form. Making available and developing automated on-line licensing systems covering re-use in those cases where licensing is applied, taking into account the copyright principle below.”
How CC came to be applied to PSI in Australia – a chronology

- **1990s**: Cutler, Wainwright – digital content strategy proposals
- **2001**: Office of Spatial Data Management (OSDM) access and reuse policy
- **2004**: Launch of Creative Commons in Australia
- **2004**: Launch by Queensland Government of Spatial Information Licensing Project
- **2005**: *Unlocking the Potential: Digital Content Industry Action Agenda, Strategic Industry Leaders Group report to the Australian Government*
- **2005 – 2006**: Queensland Government’s Government Information Licensing Framework (GILF) proposed use of Creative Commons licensing for PSI
- **2007 – 2010**: GILF project continues as a Queensland Government-QUT collaboration, developing knowledge about and models for use of CC on PSI
- **2007 on**: Australian Bureau of Statistics (ABS), Geoscience Australia (GA), Bureau of Meteorology (BoM) implement open access and adopt CC licensing; National Library of Australia; Australian Broadcasting Corporation; various State and local government initiatives
- **2008**: *OECD Ministerial Seoul Declaration on the Future of the Internet Economy - OECD Recommendations on publicly funded research (2006) and Access to PSI (2008)*
- **2008**: *Venturous Australia* report on National Innovation System (Cutler Report)
- **2009**: *Australia’s Digital Economy, Future Directions* (Department of Broadband, Communications and the Digital Economy)
- **2009**: EDIC Report (and Victorian Government’s response (2010))
- Government 2.0 Taskforce (2009), “Engage: Getting on with Government 2.0” (December 2009) and Government’s response
- **2009**: New Zealand (draft) Government Open Access Licensing Framework (NZGOAL); UK *Power of Information* report
Unlocking the Potential: Digital Content Industry Action Agenda (2005)

• Recommended that the digital content industry should:
  – Engage with work on alternative approaches to intellectual property licensing, such as Creative Commons;
  – Develop ways of improving access to Government intellectual property for commercial exploitation by digital content firms, to encourage innovation.
Venturous Australia (2008)

Recommendation 7.7

- Australia should establish a National Information Strategy to optimise the flow of information in the Australian economy.

The fundamental aim of a National Information Strategy should be to:

- utilise the principles of targeted transparency and the development of auditable standards to maximise the flow of information in private markets about product quality; and

- maximise the flow of government generated information, research, and content for the benefit of users (including private sector resellers of information).
Venturous Australia (2008)

Recommendation 7.8

- Australian governments should adopt international standards of open publishing as far as possible. Material released for public information by Australian governments should be released under a creative commons licence.

Recommendation 7.10

- A specific strategy for ensuring the scientific knowledge produced in Australia is placed in machine searchable repositories be developed and implemented using public funding agencies and universities as drivers.
Victorian Parliament’s EDIC Report (2009) - Key Recommendations

- **Recommendation 1:** That the Victorian Government release a public statement indicating that it endorses open access as the default position for the management of its public sector information.
- **Recommendation 2:** That the Victorian Government develop a whole-of-government Information Management Framework (IMF) with the following key features:
  - that the object of the IMF is to promote and facilitate increased access to and re-use of Victorian public sector information (PSI) by government, citizens, and businesses;
  - that the default position of the IMF be that all PSI is made available;
  - that the IMF define and describe criteria under which access to PSI may be restricted, or released under licence;
  - that PSI made available under the IMF be priced at no cost or marginal cost; and
  - that the IMF establish a systematic and consistent whole-of-government methodology for categorisation, storage and management of PSI.

Recommendation 14:
• That the Victorian Government adopt the Creative Commons licensing model as the default licensing system for the Information Management Framework.

Chairman’s Foreword: “The second key recommendation of the Committee is that the Victorian Government make use of the Creative Commons licensing model for the release of PSI. The Committee was told Creative Commons licences can be appropriately used for up to 85 per cent of government information and data, providing a simple to understand and widely used system for the re-use of PSI.”
Victorian Government’s response to EDIC (2010)

- Endorsed the EDIC’s overarching recommendation that the default position for the management of PSI should be open access.
- Committed to the development of a whole-of-government Information Management Framework (IMF) whereby PSI is made available under Creative Commons licensing by default with a tailored suite of licences for restricted materials.
- Supported Recommendation 14 (adopt CC licensing as the default licensing system for the IMF).
- Government’s response was released under a CC licence (CC BY-NC-ND)
  - © Government of Victoria
  - This report is protected by copyright. Apart from any use permitted under the Copyright Act 1968, and those explicitly granted below, all other rights are reserved.
  - Except for the Victorian Government logo and except where otherwise stated the Whole of Victorian Government Response to the Final Report of the Economic Development and Infrastructure Committee’s Inquiry into Improving Access to Victorian Public Sector Information and Data by Victorian Government is licensed under a Creative Commons Attribution-Noncommercial-No Derivative Works 2.5 Australia Licence (the Licence).
Government 2.0 Taskforce Report (2009)

Central recommendation: A declaration of open government by the Australian Government

Accompanying the Government’s announcement of its policy response to this report, a declaration of open government should be made at the highest level, stating that:

– using technology to increase citizen engagement and collaboration in making policy and providing service will help achieve a more consultative, participatory and transparent government

– public sector information is a national resource and that releasing as much of it on as permissive terms as possible will maximise its economic and social value to Australians and reinforce its contribution to a healthy democracy

– online engagement by public servants, involving robust professional discussion as part of their duties or as private citizens, benefits their agencies, their professional development, those with whom they are engaged and the Australian public. This engagement should be enabled and encouraged.

The fulfilment of the above at all levels of government is integral to the Government’s objectives including public sector reform, innovation and using the national investment in broadband to achieve an informed, connected and democratic community.
Government 2.0 Taskforce report (2009)

Recommendation 6: Make public sector information open, accessible and reusable [chapter 5, p 58]

6.1 By default Public Sector Information (PSI) should be:
- free
- based on open standards
- easily discoverable
- understandable
- machine-readable
- freely reusable and transformable.

6.2 PSI should be released as early as practicable and regularly updated to ensure its currency is maintained.

6.3 Consistent with the need for free and open reuse and adaptation, PSI released should be licensed under the Creative Commons BY standard as the default.
Government 2.0 Taskforce report (2009)

Recommendation 6: Make public sector information open, accessible and reusable

6.6 Where ownership of the PSI data rests with the Commonwealth, data should be released under CC BY licence. Negotiation with the other party/parties will be required to ensure release under CC BY for PSI which is not owned by the Commonwealth or is shared with another party/parties.

6.7 Copyright policy should be amended so that works covered by Crown copyright are automatically licensed under a CC BY licence at the time at which Commonwealth records become available for public access under the Archives Act 1983.

6.8 Any decision to withhold the release of PSI, other than where there is a legal obligation to withhold release, should only be made with the agreement of, or in conformity with policies endorsed by the proposed Office of Information Commissioner.

6.9 The Australian Government should engage other members of the Council of Australian Governments, to extend these principles into a national information policy agreed between all levels of government: federal, state, territory and local.
Government’s response to Gov 2.0 Taskforce report (2010)

- Generally accepted Gov 2.0 Taskforce’s recommendations (12 out of 13)
  - agreed in principle to Recommendation 6, including:
    - 6.3 Consistent with the need for free and open reuse and adaptation, PSI released should be licensed under the Creative Commons BY standard as the default.

- Government’s response was released under a Creative Commons Attribution (CC BY) 2.5 Australia licence
Further examples of adoption

- Australian Bureau of Statistics
- Geoscience Australia
- Bureau of Meteorology
- NBN Implementation Study (May 2010)
- Federal Budget Papers (May 2010)
- Australian Parliament (June 2010)
ABS Copyright

© Commonwealth of Australia

All data and other material produced by the Australian Bureau of Statistics (ABS) constitutes Commonwealth copyright administered by the ABS. The ABS reserves the right to set out the terms and conditions for the use of such material.

Apart from any use as permitted under the Copyright Act 1968, and those explicitly granted below, all other rights are reserved.

Unless otherwise noted, all material on this website – except the ABS logo, the Commonwealth Coat of Arms, and any material protected by a trade mark – is licensed under a Creative Commons Attribution 2.5 Australia licence, and in the future will be signified by either one of the graphics shown below:

Access to the details of the licence conditions is available on the Creative Commons website using the above link or the link contained within the graphics. Please also note that there are additional terms to those provided by the Creative Commons licence that apply to use of ABS material.
Copyright

Geoscience Australia supports and encourages the dissemination and exchange of information. All data and other material produced by Geoscience Australia constitutes Commonwealth copyright. Geoscience Australia reserves the right to set out the terms and conditions for the use of such material.

Save for the content on this website supplied by third parties, the Geoscience Australia logo, the Commonwealth Coat of Arms, and any material protected by a trade mark, Geoscience Australia has applied the Creative Commons Attribution 2.5 Australia licence. Geoscience Australia asserts the right to be recognised as author of the original material in the following manner:

© Commonwealth of Australia (Geoscience Australia) 2009.

As far as practicable, material for which the copyright is owned by a third party will be clearly labelled. Geoscience Australia has made all reasonable efforts to ensure that this material has been reproduced on this website with the full consent of the copyright owners.

Please note there are additional terms to those provided by the Creative Commons licence that apply to use of Geoscience Australia material.

Additional terms for use of Geoscience Australia material

If you use material from the Geoscience Australia website, there are certain obligations you must fulfil. Details of these can be found in Attributing material sourced from the Geoscience Australia website. Where your use of Geoscience Australia material requires citation, see Guide to citing Geoscience Australia sources for advice.

Further information on the use of the Geoscience Australia website and the material it contains can be found in the Geoscience Australia website Disclaimer Notice.

Enquiries
Update: Geoscience Australia

- SE Asia Satellite Data for IFCI - National Earth Observation Group, Geoscience Australia

- processed satellite data used for working out the year-to-year change in tropical forest cover in SE Asia - This work is tied to international efforts to reduce the rate and impact of climate change – data forms inputs to national carbon accounting systems, which countries (and international aid sponsors) then use to objectively monitor trends in the carbon economy.

- Nearly all releases are under CC

- Australia has encouraged Thai and Indonesian space agencies to take the same approach
The Creative Commons Licence

The Bureau of Meteorology recommends using the Creative Commons Licence for water information because it:

- provides a legally binding public notice about how your organisation's information may be used
- will provide a consistent and transparent legal framework for all water information resources
- contains strong limitation of liability and warranty clauses
- is an established de-facto international standard for licensing electronic information
- is free and costs little or nothing to implement
- requires attribution of the information author.

Creative Commons licences are widely used across the Internet by individuals, companies and governments. For example, Wikipedia and Flickr both use Creative Commons Licences. The Australian Bureau of Statistics has licensed the majority of the information on its website under the Creative Commons Licence. Geoscience Australia has licensed numerous datasets, including its Australian Mines Atlas and MODIS data, under the Creative Commons Licence.

Using an organisation's information under the Creative Commons Licence

The Creative Commons Licence allows the community to share (copy and distribute) and remix or adapt your information, provided that they attribute you as the author. However, this cannot be done in a way that suggests that you endorse them or their use of your work. The Licence also stipulates that these conditions can be waived with special permission from you.

The Licence is compatible with Australian copyright law, and therefore none of the community's statutory rights, such as their right to fair dealing, are affected. For instance, they may use your information for private study without your permission.

The Creative Commons Licence is available in plain English text and a full legal code. The Licence requires the Bureau's website to link to the text and the code.

Attributing water information suppliers and use of the Creative Commons Licence

The Bureau of Meteorology wants to ensure that water information suppliers are correctly attributed for their information. The Bureau's Australian Water Resources Information System (AWIRS) is being designed to correctly capture and publish attribution details of organisations providing water information. It will also say whether an organisation has agreed to license their information under the Creative Commons Licence.

Creative Commons (CC) and Government Guide

Our Guide to Using Creative Commons 2.5 Australia Licences on Government Copyright Materials [.pdf, 3.62MB] is now available under the “Government” topic on the Creative Commons Australia site, covering:

- how copyright law applies to Australian government material,
- how copyright can be managed to facilitate beneficial open access practices by government,
- how CC licences can be used to achieve open access to government material, and
- provides practical step-by-step guidance for agencies and their officers on licensing and use of government copyright materials under CC 2.5 Australia licences.

Professor Anne Fitzgerald

The full economic, cultural and environmental value of information produced or funded by the public sector can be realised through enabling greater access to and reuse of the information. To do this effectively it is necessary to describe and establish a policy framework that supports greater access and reuse among a distributed, online network of information suppliers and users. The objective of the literature review is to identify materials published in Australia and elsewhere dealing with policies, principles and practices relating to access to and reuse of public sector information.
